

Particle Illusion for Quantel, from Genarts

Particle Illusion for Quantel allows you to quickly and easily create amazing effects: explosions, smoke, fire, sparkles, motion graphics backgrounds, space effects, creatures, and abstract artistic effects -- literally hundreds of different types of effects. One of the great strengths of Particle Illusion is the huge library of effects that is included - over 2600 particle emitters ("effects") are currently available. Using the intuitive "Select Emitter" menu, you can browse, search and preview these effects right in the Quantel environment.

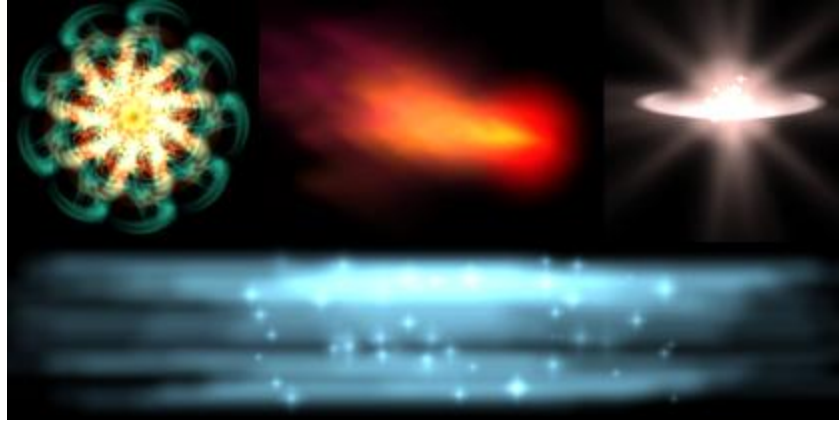

Particle Illusion popup menu to browse preset effects (emitters).

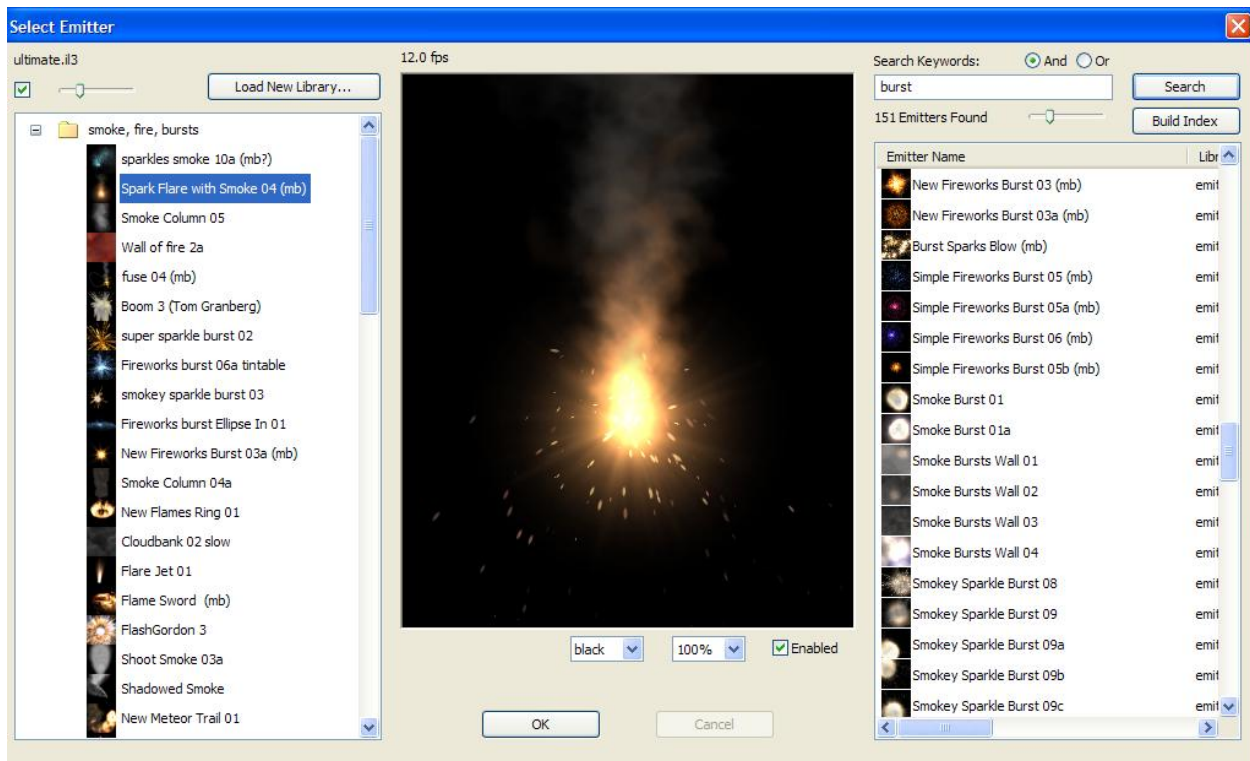

Once you've selected an emitter, you can use the plugin menus to adjust parameters such as size, life, number, and velocity, to further customize and animate the effect.

Particle Illusion menus and rendered result in Quantel
